

Assignment 1

Name | Yubin Hu

ID | 11712121

Date | 2020.09.23

Required Exercises

Exercise 1

When a C compiler compiles the following statement, how many tokens will it generate? [5 points]

```
1 | int a3 = a * 3;
```

There are 7 tokens will be generated.

- <keyword, int>
- <id, a3>
- <id, a>
- <assign, =>
- <assign, *>
- <assign, ;>
- <number, 3>

Exercise 2

In a string of length n ($n > 0$), how many of the following are there?

1. Prefixes [5 points]
2. Proper prefixes [5 points]
3. Prefixes of length m ($0 < m \leq n$) [5 points]
4. Suffixes of length m ($0 < m \leq n$) [5 points]
5. Proper prefixes of length m ($0 < m \leq n$) [10 points]
6. Substrings [10 points]
7. Subsequences [10 points]

1. $n + 1$
2. $n - 1$
3. 1
4. 1

5. $res = \begin{cases} 0 & m=n \\ 1 & \text{otherwise} \end{cases}$
6. $1 + \frac{(1+n)n}{2}$
7. 2^n

Exercise 3

Describe the languages denoted by the following regular expressions:

1. $((\epsilon | a)^* b^*)^*$ [5 points]
 2. $(a | b)^* a (a | b) (a | b)$ [5 points]
 3. $a^* b a^* b a^* b a^*$ [5 points]
1. A string consisting of a and b
 2. A string consisting of a and b whose third-to-last digit is a
 3. A string consisting of a and b with only three

Exercise 4

Write regular definitions or regular expressions for the following languages.

1. All strings representing valid telephone numbers in Shenzhen. A valid telephone number contains the country code (86), a hyphen, the area code 0755, another hyphen, and eight digits where the first one cannot be zero (e.g., 86-0755-88015159). [10 points]
2. All strings of a's and b's that start with a and end with b. [10 points]
3. All strings of lowercase letters that contain the five vowels in order. [10 points]

1 | 86-0755-[1-9][0-9]{7}

1 | a(a|b)*b

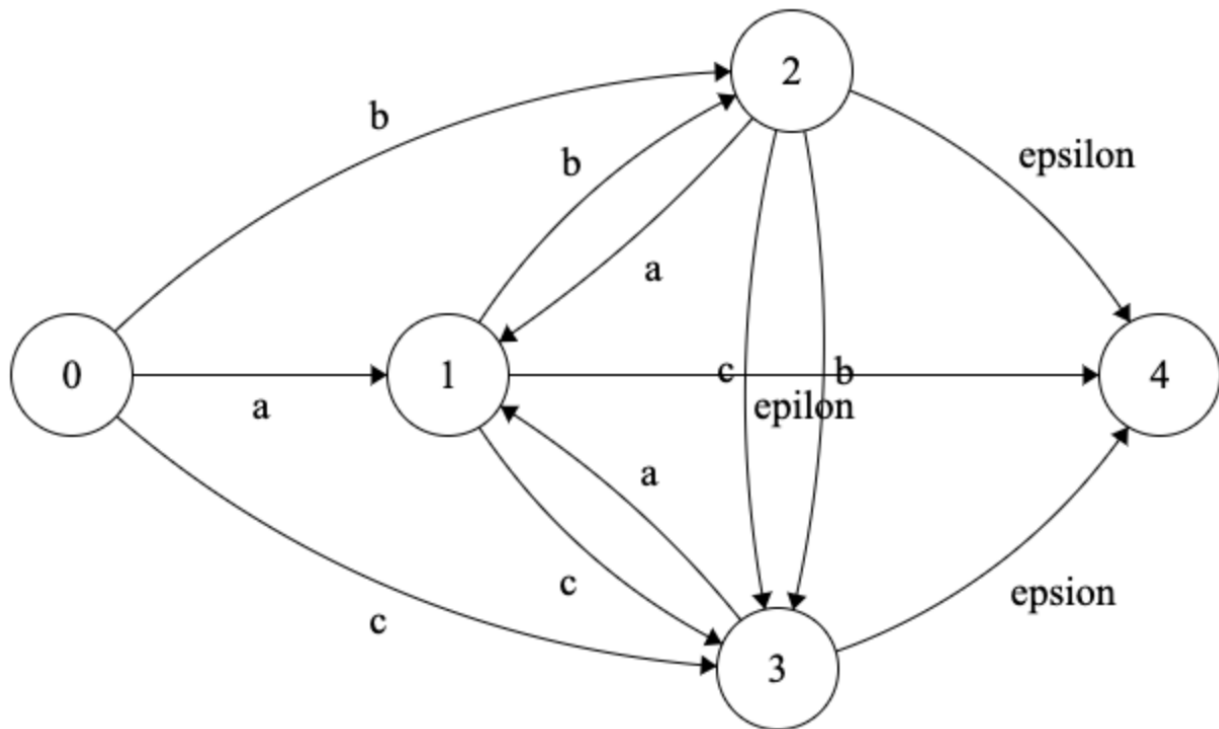

1 | [a-z^aeiou]*a[a-z^aeiou]*e[a-z^aeiou]*i[a-z^aeiou]*o[a-z^aeiou]*u[a-z^aeiou]*

Optional Exercises

Exercise 1

Suppose we have a alphabet $\Sigma = \{a, b, c\}$, write regular definitions to describe all strings over Σ without repeated letters. [Hint: You may draw an NFA for the language and convert the NFA to regular definitions.]

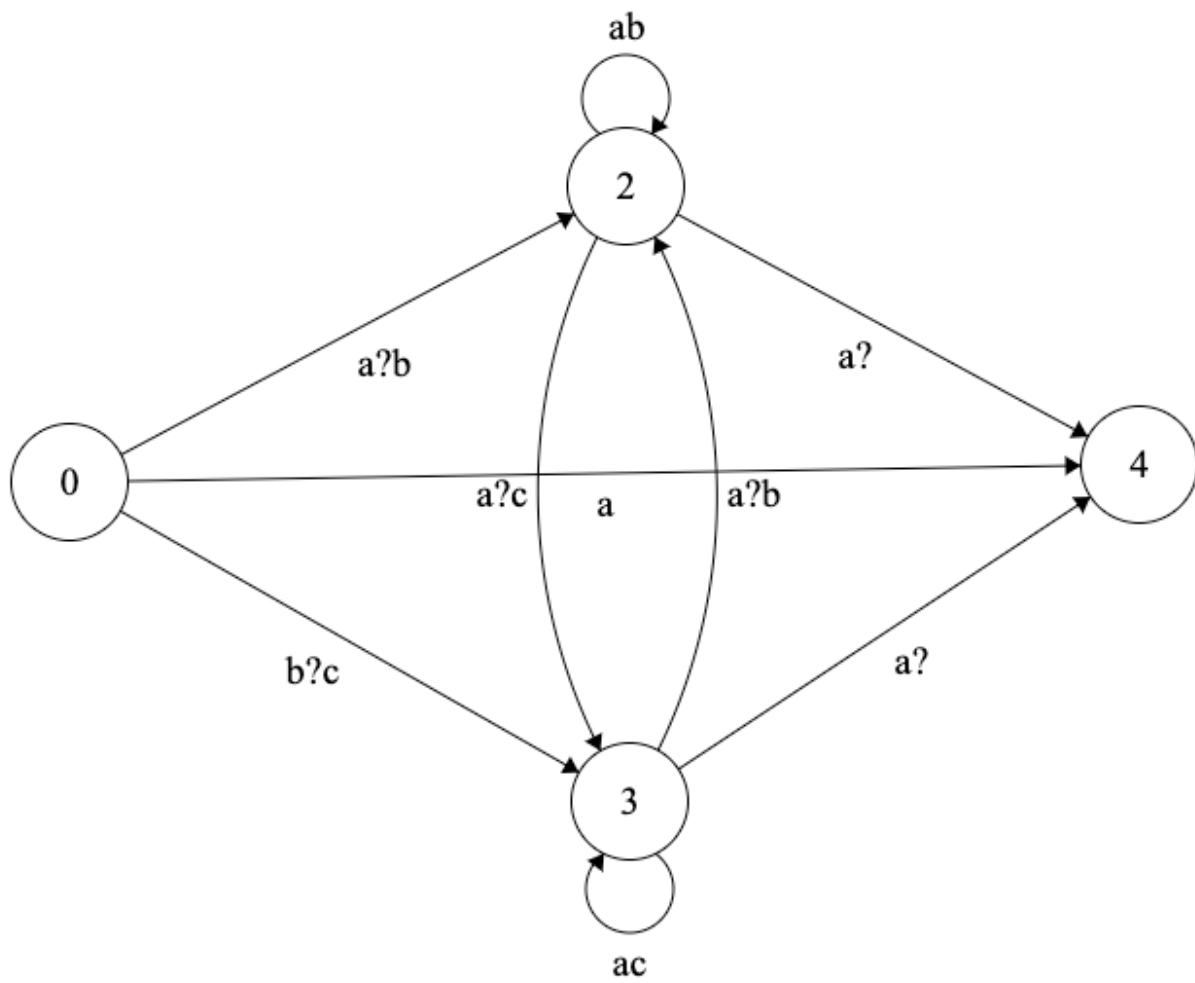

The origin NFA figure

Then, we should simplify the figure by removing the state 1, 2, 3 to get the regular definitions.

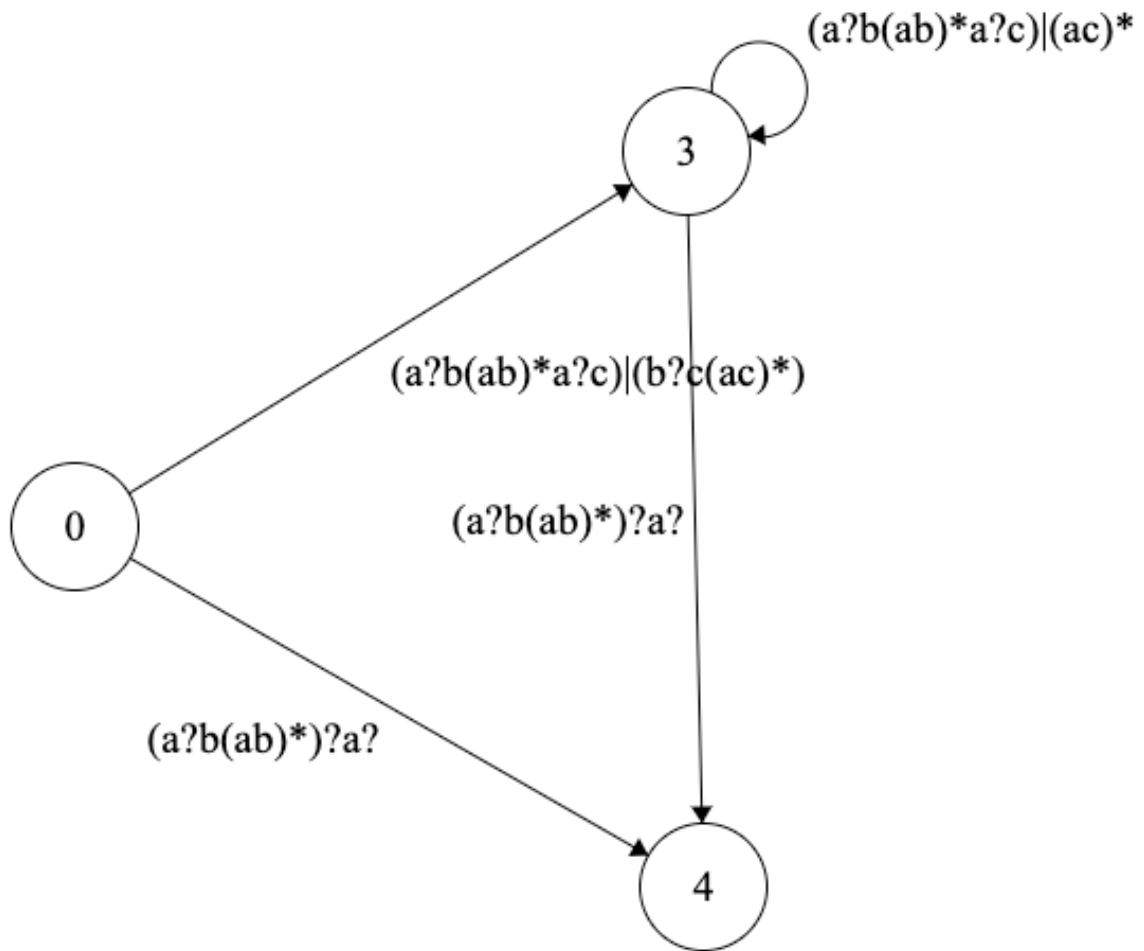

Remove state 1

edge	Regular expression
0 -> 2	a?b
0 -> 3	b?c
0 -> 4	a
2 -> 2	ab
2 -> 3	a?c
2 -> 4	a?
3 -> 2	a?b
3 -> 3	ac
3 -> 4	a?

Remove state 2

edge	Regular expression
0 -> 3	$(a?b(ab)^*a?c) \mid (b?c(ac)^*)$
0 -> 4	$(a?b(ab)^*)?a?$
3 -> 3	$(a?b(ab)^*a?c) \mid (ac)^*$
3 -> 4	$(a?b(ab)^*)?a?$

Remove state 3

edge	Regular expression
0 -> 4	$((a?b(ab)^*a?c) (b?c(ac)^*))((a?b(ab)^*a?c) (ac)^*)?(a?b(ab)^*)?a?$

So, from NFA to regular expression, the result is

$((a?b(ab)^*a?c)|(b?c(ac)^*))((a?b(ab)^*a?c)|(ac)^*)?(a?b(ab)^*)?a?$
